CHAPTER 1 INTRODUCTION

UNIVERSITY OF DEBRECEN

The aim of the University of Debrecen is to become a university of medical sciences committed to the prevention and restoration of health of the people, not only in its region but in the entire country.

In the past two decades both medical science and health care have entered a new era: one can witness such a progress in medical sciences that has never been seen before. Modern attitudes in health care should be enforced in practice taking the human personality into consideration. These approaches demand the application of the most modern techniques in all fields of the medical education.

All curricula wish to meet the challenges of modern times, they prepare students for co-operation and teamwork and they embody some very basic values. They are comprehensive; they take into consideration the whole human personality (body and soul) in its natural and social surroundings; and they are based upon the best European humanistic traditions.

With respect to education, both students and teachers are inspired to acquire higher levels of professionalism, precision, and problem solving skills in order to be able to understand and handle the changing demands of health care.

The University of Debrecen is already internationally recognized in the fields of both basic and clinical research. Special attention is given to facilitate and support the close co-operation of researchers representing basic science and clinical research, and/or interdisciplinary studies.

With respect to therapeutic practice, the main objective is to provide high quality, effective, up to date and much devoted health care to all members of the society, showing an example for other medical institutions in Hungary. One of the primary tasks is to continuously improve the actual standards of the diagnostic and therapeutic procedures and techniques, and to establish regional or even nationwide protocols.

With respect to serving the community, all faculty members wish to play a central role in shaping the policies of the health service; both within the region and in Hungary. They also want to ensure that sufficient number of medical doctors, dentists and other health care experts with university education is provided for the society. Humanity, empathy, social sensitivity, team-spirit, creativity, professionalism, independence, critical and innovative thinking, co-operation and management help to meet the challenges of medical education, research and therapy of the 21st century. The organizational structure, including the multi-faculty construction of the institution, is a constantly improving, colourful educational environment.

HIGHER EDUCATION IN DEBRECEN

A Brief History

1235: First reference to the town of Debrecen in ancient charters.

1538: Establishment of the “College of Reformed Church” in Debrecen.

1567: Higher education begins in the College.

1693: Declaration of Debrecen as a “free royal town”.

1849: Debrecen serves as the capital of Hungary for 4 months.
1912: Establishment of the State University of Debrecen comprising the Faculties of Arts, Law, Medicine and Theology.
1918: Inauguration of the Main Building of the Medical Faculty by King Charles IV of Hungary.
1921: The Medical Faculty becomes operational.
1932: Completion of buildings of the campus.
1944: Although during the Second World War, Debrecen became the capital of Hungary again (for 100 days), the University itself is abandoned for a while.
1949: The only year when the University has five faculties.
1950: The Faculty of Law idles; the Faculty of Science is established.
1951: The University is split up into three independent organizations: Academy of Theology, Medical School, Lajos Kossuth University of Arts and Sciences.
1991: The “Debrecen Universitas Association” is established.
1998: The “Federation of Debrecen Universities” is founded.
2000. The federation is transformed into the unified “University of Debrecen” with all the relevant faculties and with some 20,000 students.

Debrecen is the traditional economic and cultural center of Eastern Hungary. In the 16th century Debrecen became the center of the Reformed Church in Hungary and later it was referred to as the "Calvinist Rome". In the 17th century Debrecen became the mediator between the three parts of Hungary: the part under Turkish occupation, the Kingdom of Hungary and the Principality of Transylvania. For short periods of time, Debrecen served twice as the capital of Hungary. Nowadays, with its population of approximately a quarter of a million, it is the second largest city in Hungary.

Debrecen is a unique city: one of the main attractions and places of natural uniqueness in Hungary is Hortobágy National Park, known as “puszta” with unique flora and fauna and ancient animal husbandry traditions. A very lovely part of Debrecen is the “Nagyerdő” (“The Great Forest”), which is a popular holiday resort and besides, it accommodates the University campus too.

The history of higher education in Debrecen goes back to the 16th century when the College of the Reformed Church was established. The University of Debrecen was established in 1912, initially having four faculties (Faculties of Arts, Law, Medicine and Theology). The educational activity at the University started in 1924. In 1951 the Faculty of Medicine became a self-contained, independent Medical University for training medical doctors.

The special training of dentists began in 1976. As a further development the University Medical School established the Health College of Nyíregyháza in 1991. In 1993, as part of a nationwide program, the University was given the rights to issue scientific qualifications and new Ph.D. programs were also launched. The Faculty of Public Health was established in 1999, while the Faculty of Dentistry was founded in 2000.

The health science education system is built vertically from the lowest (post-secondary or certificate) to the highest (Ph.D-training) levels.

The introduction of the credit system, starting in September 2003, has been mandatory in every Hungarian university, helping the quantitative and qualitative evaluation of the students' achievements.

The syllabi and classes of all courses correspond to European standards.

CHAPTER 2

MISSION AND HISTORY OF THE UNIVERSITY OF DEBRECEN FACULTY OF HEALTH SCIENCES

MISSION OF THE UNIVERSITY OF DEBRECEN FACULTY OF HEALTH SCIENCES

The University of Debrecen Faculty of Health Sciences believes that active participation of the students in the learning process makes them understand concepts, policies better.

The mission of the University of Debrecen Faculty of Health Sciences is to improve the health of individuals and communities locally and globally with excellent education of health care workers, to improve the well-being of the vulnerable, to fight against social injustice through value-driven, creative social work education and research with programs that meet the needs of a changing society. The aim of the University of Debrecen Faculty of Health Sciences is to offer high standard and practice-oriented trainings, as well as a high quality educational and research area for the present and future students.

HISTORY OF THE UNIVERSITY OF DEBRECEN FACULTY OF HEALTH SCIENCES

The institution was founded in Nyíregyháza on 1st September 1990. The training started with General Social Work and Health Visitor degree programs. In 1991 the degree program in Health Care Management, in 1993 the degree program in Nursing were launched. The degree program in Medical Diagnostic Laboratory Analyst started in 1997, a year later the degree program in Paramedics started, while the degree program in Physiotherapy started in 1999. On 1st January 2000 the integrated University of Debrecen was founded, the previously independent institutions were (re)joined with legal succession. Due to these changes our faculty joined the Centre for Medical and Health Sciences of the University of Debrecen, whose task was to provide health care services in the Eastern Tisza region and the North-East region, as well as to organize specialist and post-qualifying trainings for doctors, dentists, chemists, and other health professionals working in public health and health care.

The training programs of the faculty were accredited by the Hungarian Accreditation Board that acknowledged our training programs. Throughout the development of our Faculty one of the most important steps was that the Faculty realized the potentials provided by the integration. Not only did our institution join the Centre for Medical and Health Sciences within a short time, but it took the advantages of cooperating with other faculties of the university. Our faculty has fulfilled the regional requirements set in the foundation document and has established cooperation with more than 20 hospitals, health care institutions and more than 120 social institutions in several regions, thus participating and integrating in the health and social care systems.

In accordance with the European Union conception, the faculty offers a training program that includes degree programs at bachelor (B.Sc./B.A.) and master (M.Sc./M.A.) levels, as well as post-qualifying training programs.

At present students can choose from 6 Bachelor degree programs, 3 Master degree programs and 9 post qualifying trainings (in Hungarian language) in health and social sciences. The scientific background of the trainings is provided by the 14 faculties of the University of Debrecen, which is one of the best-known institutions in Hungary.

After the first Master degree program of the Health College Faculty had been accredited and

MISSION AND HISTORY OF THE UNIVERSITY OF DEBRECEN FACULTY OF HEALTH SCIENCES

registered, our institution altered its name to Faculty of Health and has been using it since 1st September 2007. In September 2008 the faculty was the first to launch the Master Degree Program in Social Work in Health Care in the country. In 2009 the Hungarian Accreditation Board (MAB) accredited the Master's Degree Program in Nursing as well as in Social Work and Social Economy (SOWOSEC), the latter one issues a Joint Degree.

Since 1st August 2022 the Faculty of Public Health merged with the Faculty of Health and now continues to function as the Faculty of Health Sciences.

Concerning the number of students the Faculty has become one of the biggest faculties of the University of Debrecen since 1990 and has created an excellent educational and scientific background strengthened by significant international relationships with about 14 countries. About 3000 students study in the Bachelor and Master degree programs and in the specialized further trainings.

CHAPTER 3

SOCIAL WORK IN HEALTH CARE MSC

<i>Qualification:</i>	<i>Social Worker in Health Care</i>
<i>Field of training:</i>	<i>medical and health sciences</i>
<i>Length of training:</i>	<i>4 semesters</i>
<i>Credits:</i>	<i>120</i>
<i>Type of training:</i>	<i>full time and part time</i>

Objectives

The aim of the degree program is to train professionals who with the knowledge and methods gained about the fields of health and social sciences are able to tackle both health and social related problems by performing professional, social and intersectoral cooperation. Graduates will become part of preventive activities, as well as activities targeting acute problems, and after-care.

Master Degree Curriculum

The Social Work in Health Care master degree curriculum was developed to provide students an in-depth knowledge of social work practice in health settings. The program has four primary areas that students can select from: care for the elderly, rehabilitation, working with the disabled, and hospital social work. In working with chronic patients, oncological and psychiatric care is emphasized.

Students should carefully review the curriculum offered because it contains elective courses. Two types of electives are offered: required courses: (1) those where you must choose the course from a specified group of courses and elective courses: (2) those where you can choose whatever course you would like to take. Both types provide credit toward the degree.

Why are four areas of study and a variety of courses offered? Some students have already decided on the specific area of Social Work in Health Care where they want to work after graduation. These students can select one of the four primary areas and start to specialize immediately. For example, if they want to work in the care of the elderly they might select subjects from the curriculum like Gerontology and Clinical Geriatrics I and II, Social Work and the Elderly I and II and Psychiatric Patient Care I and II. Other students enter the program knowing that they want to be a social worker in health care but have not decided on a particular specialization. For these students the modular curriculum provides the opportunity to select courses from each of the four different areas, to learn about and acquire some knowledge that relates to those areas.

Students have the possibility to engage in practice outside the institution in an area of specialization where students learn that area's distinctive characteristics and features. Using this experience, in addition to the classroom courses, students can write their thesis about problems found in that particular field. Thus, students can meet the formal requirements of acquiring required credits in each subject area as well as to learn the characteristics of a given field and to gain special knowledge.

To ensure that the content and the standards of the program meet international requirements an International Council Board has been established with the participation of well-known and respected professors, who continuously engage in program oversight and frequently give lectures to the students. The members of the board are: Prof. Dr. Thomas R. Lawson (USA), Dr. Steve Drewry (USA), Prof. Dr. Valeria Tothova (Czech Republic), Prof. Hannu Pietiläinen (Finland).

Competences

- in comprehensive professional knowledge by integrating the characteristics of social work and health care,
- to reveal and analyze the individual and societal connection between health and social related problems,
- to work out and implement developmental programs as well as independent supportive processes,
- to tackle complex health and social related problems,
- to work out and implement social diagnosis and therapy,
- to reveal individual and wider resources to make cooperation possible,
- to work out and apply social activities as part of rehabilitation,
- to perform team-work.

Program of the course

Basic subjects: Health Policy, Health Science Studies in Health Social Work, Health and Social Law, Sociology of Health, Health Psychology and Mental Hygiene, Clients and Methods of Social Work

Professional subjects: Health Systems and Management Studies, Applied Research Methodology, Quality Assurance in Social and Health Systems, Health Social Work Field Practice, Social Surroundings and Epidemiology, Fields and Methods of Health Social Work, Rehabilitation, Health Science Studies in Health Social Work, Deviance and Behavior Disorders

Specialized subjects: Disability and Society, Gerontology and Clinical Geriatrics, Equality and Social Integration, Social work with psychiatric patients, Social Work with Patients suffering chronic diseases, Social Work with Mentally Ill Patients and Addicts, Social Work with Elderly People, Community Care and Team Work, European Economic and Social Policy

Career possibilities

Graduates with Health social work Master's degree will find jobs in institutions and services which provide comprehensive health and social care using inter-professional and widened competencies for the sake of clients and patients. These include elderly homes, hospice care, institutions for addicts, disabled people or psychiatric patients. They can also continue their studies in Doctoral School.

CHAPTER 4

TRAINING REQUIREMENTS AND OUTCOME REQUIREMENTS

Social Work in Health Care Master's Degree Program

1. Name of the Master's Degree Program: Social Work in Health Care

2. Education level that can be obtained in the Master's Degree Program and the official name of the qualification that can be found in the diploma:

- education level: Master's Degree (magister, master; abbreviation: MSc)
- qualification: graduate Social Worker in Health Care
- English name of the qualification: Social Worker in Health Care

3. Program area: Medical and Health Sciences

4. Degrees approved for entry to the Master's Degree Program:

4.1. Social Work and Social Pedagogy – earned credits are fully awarded.

4.2. Nursing and Patient Care, Health and Prevention, Health Care Management, Social Studies, Sociology, Political Sciences, Psychology, Pedagogy – credits accepted according to point 11.

4.3. Any bachelor or master degree and college or university degree listed in Act LXXX. of 1993 on Higher Education, which can be transferred by the credit transfer committee of the tertiary institution on the basis of the acquired knowledge – certain credits are awarded.

5. Duration of education: 4 semesters

6. Number of credits required in order to obtain Master Degree: 120 credits

6.1. Number of credits that can be assigned to basic studies: 15-20 credits

6.2. Number of credits that can be assigned to the professional core material: 50-60 credits

6.3. Number of the credits that can be assigned to differentiated professional material together with the thesis work: 35-50 credits

6.4. Minimal value of credits that can be assigned to elective optional subjects: 5 credits

6.5. Credit value assigned to thesis work: 20 credits

6.7. Percent of the practice studies: according to the institutional curriculum at least 40%.

7. Educational aims of the Master' Degree Program, professional competencies to be acquired:

The aim of the degree program is to train professionals who, with the wide knowledge obtained in the health and social sciences, are able to tackle both health and social related problems by performing professional, social and interprofessional cooperation. Graduates will engage in preventive activities, as well as activities targeting acute problems and after-care. Having gained a thorough theoretical knowledge and practice they will be able to continue their studies in a doctoral program:

a) Knowledge acquired in Master's Degree Program:

- research and analysis about the complex connections between individual, social, epidemiological and legal conditions,
- service planning and evaluation,

- health science,
- applied behavior science, mental hygiene and psychology,
- rehabilitation,
- social work,
- health management

b) Graduates from Master's Degree Program are able to:

- use integrated professional knowledge and its practical application
- uncover the individual and social connections of health and social problems, to develop developmental programs,
- develop and implement independent supporting processes,
- manage complex health and social problems,
- to reveal, mobilize and develop individual and environmental resources in order to solve problems effectively between health and social services and the micro-environment,
- provide social support tasks for groups struggling with special health and mental problems,
- develop and implement social development programs as a part of rehabilitation for illnesses and groups requiring special rehabilitation,
- participate in team work

c) Personal characteristics and skills necessary for practice qualification:

- good communication,
- creativity, flexibility,
- problem recognition, analysis and solution,
- information-processing,
- intuition and methods,
- learning,
- sensitivity to environment,
- commitment and need to take part in professional training,
- initiative,
- personal responsibility,
- ability to make decisions,
- system-oriented way of thinking
- suitability for cooperation, for participating in team work, and after the necessary practice the ability to perform management duties

8. Fields of knowledge and skills for the Master's Degree and qualification:**8.1. Basic fields of knowledge necessary for the extension of knowledge obtained in the Bachelor Degree: 15-20 credits**

- social components of health conditions and welfare benefits:
- the connections of social status, health status and way of life, basic epidemiology and demographics, health policy and economy, legislation of health care, patients' rights, health sociology, health psychology, welfare policies, insurance and financing schemes;
- social work: applied methods and intervention techniques of health social work, practice of social work;
- health science knowledge: environmental-health, job and food, human ecology, health promotion, health pedagogy.

8.2. Fields of knowledge of the professional core material: 50-60 credits

- social work: social work with elderly, health impaired, crisis intervention, social and health prevention, health social work, the ethics and economy of social assistance;
- applied behavior science, mental hygiene and psychology: social-psychology and social psychiatry, psychology of deviance, basics of family psychology, psychology of illnesses, psychology of nursing, loss psychology, psychiatry, mental hygiene, psychiatry and psychotherapeutics;
- rehabilitation and social integration: rehabilitation, rehabilitation of special groups;
- management: health management, project management, research and methods, planning and evaluating of services;
- health science: health and social characteristics of special groups, health and social services

8.3. Elective optional field of knowledge of the professional core material: 35-50 credits**Fields of knowledge of the differentiated professional knowledge:**

- **gerontology:** biological and physiological characteristics of ageing, social and political implications of the ageing society, psychology of ageing, chances of healthy ageing, ecological gerontology, psychiatric illnesses in old age, the role of environment, work, nutrition and the society in the process of ageing, health promotion in old age, special tasks of social work in elderly care;
- **studies of disability:** situation and quality of life of disabled people, equal opportunities and social inclusion, programs helping inclusion, rehabilitation of the disabled people,
- **mental illnesses and addictions:** health and social characteristics of mental illnesses and addictions, individual, family and community effects and their cultural components, prevention and treatment, therapeutic and mental hygiene methods, rehabilitation;
- **social work with long-term and chronic patients:** situation of patients struggling with chronic and non-infectious illnesses, groups at risk, prevention, targeted and effective assistance and the tool system of rehabilitation, dying and the process of grief.

Diploma work: 20 credits

9. Requirements of professional practice in connection with the education:

Intensive field practice for at least 15 credits is a part of the education. The duration of the intensive field practice is 400-450 hours. The intensive field practice can be divided between the fields of knowledge of the professional core material and the differentiated professional material.

10. Requirements of acquiring a foreign language:

The Master's Degree requires at least one complex (oral and written) intermediate (B2) language exam recognized by the state or an equivalent school leaving certificate in any living language that has scientific professional literature of the given profession be obtained.

11. Admission requirements to Master's Degree Program:

11.1. On the basis of the obtained Bachelor qualification in Nursing and Patient Care, Health and Prevention, Health Care Management 45 credits from Social Work and Social Policy basic studies should be acceptable on the basis of the Act on Higher Education.

The missing 20 credits should be obtained in parallel with the Master's Degree Program within two semesters according to the academic and examination rules of the higher educational institution.

11.2. On the basis of the obtained Bachelor qualification in Political Science, Sociology, Social Studies, Pedagogy and Psychology 45 credits from Social Work and Health Care basic studies should be acceptable on the basis of the Act on Higher Education. From the 45 credits at least 25 credits should be acceptable from social work and at least 20 credits from the topics of health care.

The missing 20 credits should be obtained in parallel with the Master's Degree Program within two semesters according to the academic and examination rules of the higher educational institution.

11.3. On the basis of the obtained Bachelor qualification in the field of Teacher's Training, 40 credits from Social Work and Social Policy and 20 credits from Health Care basic studies should be acceptable on the basis of the Act on Higher Education.

The condition of the Admission is that the students should have at least 30 credits in the listed fields of knowledge.

The additional missing 30 credits should be obtained in parallel with the Master's Degree Program according to the academic and examination rules of the higher educational institution.

CHAPTER 8 CALENDAR

OPENING CEREMONY: 4th September 2022

1st SEMESTER

REGISTRATION PERIOD: 1st September - 18th September 2022

Year	Course	Examination Period
1st year 2nd year	5th September - 16th December 2022 (15 weeks)	19th December 2022- 12th February 2023 (6 weeks)

2nd SEMESTER

REGISTRATION PERIOD: 1st February – 19th February 2023

Year	Course	Examination Period
1st year 2nd year	13th February – 26th May 2023 (15 weeks)	30th May - 7th July 2023 (6 weeks)

CHAPTER 9

ACADEMIC PROGRAM FOR CREDIT SYSTEM

In September, 2003, the introduction of the credit system became compulsory in every Hungarian university, including the University of Debrecen. The aim of the credit system is to ensure that the students' achievements can be properly and objectively evaluated both quantitatively and qualitatively.

A credit is a relative index of cumulative work invested in a compulsory, required elective or optional subject listed in the curriculum. The credit value of a course is based upon the number of lectures, seminars and practical classes of the given subject that should be attended or participated in (so called „contact hours”), and upon the amount of work required for studying and preparing for the examination(s) (in the library or at home). Together with the credit(s) assigned to a particular subject (quantitative index), students are given grades (qualitative index) on passing an exam/course/class. The credit system that has been introduced in Hungary is in perfect harmony with the European Credit Transfer System (ECTS). The introduction of the ECTS promotes student mobility, facilitates more organization of student' exchange programs aimed at further education in foreign institutions, and allows recognition of the students' work, studies and achievements completed in various foreign departments by the mother institution.

Credit-based training is flexible. It provides students with a wider range of choice, enables them to make progress at an individual pace, and it also offers students a chance to study the compulsory or required subjects at a different university, even abroad. Owing to the flexible credit accumulation system, the term „repetition of a year” does not make sense any longer.

It should be noted, however, that students do not enjoy perfect freedom in the credit system either, as the system does not allow students to randomly include subjects in their curriculum or mix modules. Since knowledge is based on previous knowledge, it is imperative that the departments clearly and thoroughly lay down the requirements to be met before students start studying a subject.

The general principles of the credit system are the following:

According to the credit regulations, students should obtain an average of 30 credits in each semester. The criterion of obtaining 1 credit is to spend some 30 hours (including both contact and noncontact hours) studying the given subject. Credit(s) can only be obtained if students pass the exam on the given subject. Students accumulate the required amount of credits by passing exams on compulsory, required elective and optional subjects. Completion of every single compulsory credit course is one of the essential prerequisites of getting a degree. Courses belonging to the required elective courses are closely related to the basic subjects, but the information provided here is more detailed, and includes material not dealt within the frame of the compulsory courses. Students do not need to take all required elective courses, but they should select some of them wisely to accumulate the predetermined amount of credits from this pool. Finally, a certain amount of credits should be obtained by selecting from the optional courses, which are usually not closely related to the basic (and thus mandatory) subjects, but they offer a different type of knowledge.

Students can be given their degree if, having met other criteria as well, they have collected 120 credits during their studies. Considering the recommended curriculum, this can be achieved in four years.

The pilot curricula show the recommended pacing of compulsory courses. If these courses are carefully supplemented with credits obtained from the necessary number of required elective and optional courses, students can successfully accumulate the credits required for their degree within 4 semesters.

The diploma work is worth 20 credits.

Internship (supervised practices) in the final year is compulsory.

Regulations concerning the training of students in the credit system prescribe a minimum amount of credits for certain periods as outlined in the Regulations of Training and Examination (RTE).

Compulsory courses for the 1. year

Sem	Subjects	Neptun code	L	S	P	Exam	Crd	Prerequisites of taking the subject

Department of Social Sciences and Social Work	Social Security System.	EKTT-394-00N-EN	3	2	28	AW5	None

Name of course leader: György Jóna Ph.D. Habil.

Course lecturers: György Jóna Ph.D. Habil.

Type of assesment means:

ESE: End of Semester Examination (ESE)

AW5: Term mark/ Assesment of work (5-grade)

AW3: Term mark/Assesment of work (3-grade)

SIG: signiture

Type of subject:

C= Compulsory subject:

RE= Required elective courses

OP= Optinal courses /Freely choosen courses

The schedule is based on the current semester's schedule.

The credit value of Occupational Safety and Physical Education subjects are 1-1 credit, which are defined in the major's training requirements and outcome requirements, must be completed in excess of the number of credit required to obtained the final certificate.

It is mandatory for full time master's students to participate in two hours of Physical Education per week in one semester. Completion of the Physical Education requirements is a condition for issuing the final certificate.

Occupational, Fire and Injury Protection

Name of course leader: Attila Sárváry Ph.D.
--

Course lecturers: József Legoza Ph.D.
--

Physical Education

Name of course leader: Mihály Orendi

Course lecturers: Mihály Orendi
--

120 credits are required to obtain a diploma

Credit value of compulsory courses: 70 credits

Credit value of required elective courses: 24 credits

Credit value of optional courses: 6 credits

Thesis work: 20 credits

CHAPTER 10 ACADEMIC PROGRAM FOR THE 1ST YEAR

Department of Health Informatics

Subject: **HEALTH MANAGEMENT STUDIES**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: 14

1st week:

Lecture:

History of the health care I.

2nd week:

Lecture:

History of the health care II.

3rd week:

Lecture: History of the health care III.

4th week:

Lecture: Finance system of the health care I.

5th week:

Lecture: Finance system of the health care II.

6th week:

Lecture:

The operation of outpatient care and the structure of inpatient care I.

7th week:

Lecture:

The operation of outpatient care and the structure of inpatient care II.

8th week:

Lecture:

The operation of outpatient care and the structure of inpatient care III.

9th week:

Lecture: The importance of teamwork in health care I.

10th week:

Lecture: The importance of teamwork in health care II.

11th week:

Lecture: Health professionalization and integration I.

12th week:

Lecture: Health professionalization and integration II.

13th week:

Lecture: The place and role of controlling health care I.

14th week:

Lecture:

The place and role of controlling health care II.

Requirements

Prerequisite: -

Active participation is required. If it is necessary, further re-examinations will be arranged at later dates.

Content:

The course aim is to present the evolution and history of the Hungarian and international health management system and its main functions and mechanism. In addition, we try to transform the theoretical novel health management knowledge and competence into practical facility. This

course aim is to the student receive update knowledge about the functions and modern structure of health marketing and its planning.

The main topics are in this course:

- History of the health care,
- Finance system of the health care,
- Outpatient care operation and in-patient care structure,
- The importance of teamwork in health care,
- Health professionalisation and integration,
- The place and role of controlling health care.

Active participation is required. If necessary, a second re-examination will be arranged at a later date.

Lectures and supplementary materials will be available in the Moodle.

<http://journals.lww.com/jphmp/Pages/default.aspx>

Name of module organiser: Péter Takács Ph.D.

Course lecturer(s): György Jóna Ph.D. Habil.

Department of Psychology

Subject: **HEALTH PSYCHOLOGY AND MENTAL HYGIENE I.**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: 28

1st week:

Lecture: Health and mental health: health psychology, history of development of this discipline.

2nd week:

Lecture: The basic issue of health psychology and its main fields.

3rd week:

Lecture: Behavioral risk factors: 'behavioral pathogens', the phenomenon of the learned helplessness and its mechanism.

4th week:

Lecture: Behavioral immunogens: the abandonment of risk behaviors, positive psychology, flow, humor.

5th week:

Lecture: The critical reviewing and analysis of the views in connection with health and illnesses.

6th week:

Lecture: Communication — decision-making — cooperation.

7th week:

Lecture: The general models of mental health.

8th week:

Lecture: The models of health development.

9th week:

Lecture: The health belief models of health psychology.

10th week:

Lecture: Further models of health psychology. Cognitive, behavioral concepts, concepts concerning perceived control, behavioral intention and norms.

11th week:

Lecture: At the point of intersection of demands: the correspondence of health psychology to social demands versus the demand of health social work

from health psychology versus development along inner principles.

12th week:

Lecture: Health psychology and self-management.

13th week:

Lecture: Human and material environment of

health social work. The validity of ABX model.

14th week:

Lecture: Health psychological and mental hygienic aspects of chronic ill, disabled and dying people's social care.

Requirements

Prerequisite: There are no requirements to take the Health Psychology and Mental Hygiene I.

Attendance at lectures is highly recommended. The current knowledge of students will be evaluated in an oral exam based upon the lecture topics.

Content:

1. Health and mental health: health psychology, history of development of this discipline.
2. The basic issue of health psychology and its main fields.
3. Behavioral risk factors: 'behavioral pathogenes', the phenomenon of the learned helplessness and its mechanism.
4. Behavioral immunogenes: the abandon of risk behaviors, positive psychology, flow, humour.
5. The critical reviewing analysis of the views in connection with health and illnesses.
6. Communication — decision-making — cooperation.
7. The general models of mental health.
8. The models of health development.
9. The health belief models of health psychology.
10. Further models of health psychology. Cognitive, behavioral concepts, concepts concerning perceived control, behavioral intention and norms.
11. At the point of intersection of demands: the correspondence of health psychology to social demands versus the demand of health social work from health psychology versus development along inner principles.
12. Health psychology and self-management.
13. Human and material environment of health social work. The validity of ABX model.
14. Health psychological and mentalhygienic aspects of chronic ill, disabled and dying people's social care.

Lectures and supplementary materials will be available in the Moodle.

Name of module organiser: Andrea Sárváry Ph.D.

Course lecturer(s): Csilla Tatai M.A., Katalin Dallos

Department of Social Sciences and Social Work

Subject: **APPLIED RESEARCH METHODOLOGY I.**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Seminar: 28

1st week:

Lecture: Language of research (types of questions, time in research, types of relationships).

2nd week:

Lecture: Variables, hypotheses, types of data, unit of analysis.

3rd week:

Lecture: Built research model. Statistical modelling.

4th week:

Lecture: Philosophy of research (deduction & induction, validity). Ethics in research.

5th week:

Lecture: Conceptualizing, problem formulation, concept mapping.

6th week:

Lecture: Evaluation research, the research cycle.

7th week:

Lecture: Sampling. Measurement. Reliability.

8th week:

Lecture: Survey Research. Scaling.

9th week:

Lecture: Interviews. Qualitative Measures. Experimental Design.

10th week:

Lecture: Analysis. Data Preparation. Descriptive Statistics.

11th week:

Lecture: Inferential Statistics. T-test, general linear model, regression.

12th week:

Lecture: Inferential Statistics. Crosstabs.

13th week:

Lecture: Write-Up.

14th week:

Lecture: Case studies.

Requirements

Prerequisite:

The course requirement is:

- regular participation in lessons,
- active participation in the work,

I. oral exam and presentation of a research plan (written)

II. written task - presenting relevant case studies on the subject,

III. presenting (in writing or orally) case studies.

Content: The course objective: students will learn about the logic of research in social sciences and health sciences. They learn quantitative and qualitative methods, specific methods and analytical techniques. Specific educational goal is to acquire knowledge independently and in

groups and active use of the knowledge gained. The course will contribute to the preparation for a Ph.D. degree as well. The acquisition of knowledge of the course material the student will be able to carry out such work independently or in teams.

Foundations (Language Of Research, Philosophy of Research, Conceptualizing, Evaluation Research) – Sampling – Measurement (Validity, Reliability, Levels of Measurement, Survey Research, Interviews, Scaling, Qualitative Measures) – Design – Analysis (Introduction to data analysis, Data Preparation, Descriptive Statistics, Inferential Statistics – Using a spreadsheet: Excel, Calc; using the R program) - Write-Up

Lectures and supplementary materials will be available in the Moodle.

Name of module organiser: Gergely Fábíán Ph.D. Habil.

Course lecturer(s): Anita Rusinné Fedor Ph.D. Habil., Péter Takács Ph.D., Mihály Fónai CSc.

Subject: **CLIENTS AND METHODS OF SOCIAL WORK**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: 14

Seminar: 14

1st week:

Lecture: Family life cycles I.: family system theory; stages of marriage/parenting, families of preschool children.

Seminar: Discussion of the health social work's role and tasks related to the topic. Presentation by students related to the topic of the lecture.

2nd week:

Lecture: Family life cycles II.: stages of families with school-aged children, and families with teenagers.

Seminar: Discussion of the health social work's role and tasks related to the topic. Presentation by students related to the topic of the lecture.

3rd week:

Lecture: Family life cycles III.: stages of families with young people living home, middle-aged parents and aging families.

Seminar: Discussion of the health social work's role and tasks related to the topic. Presentation by students related to the topic of the lecture.

4th week:

Lecture: Crisis I.: Factors causing crises, Responses to crisis, Signs of crisis.

Seminar: Discussion of the health social work's role and tasks related to the topic. Presentation by students related to the topic of the lecture.

5th week:

Lecture: Crisis II.: Phases of crisis development, Coping mechanism, The duration and possible outcomes of crisis, Crisis intervention.

Seminar: Discussion of the health social work's role and tasks related to the topic. Presentation by students related to the topic of the lecture.

6th week:

Lecture: Suicide I.: Risk factors for and warning signs for suicide, impact of suicide on social relationships, specialty in grieving process.

Seminar: Discussion of the health social work's role and tasks related to the topic. Presentation by students related to the topic of the lecture.

7th week:

Lecture: Suicide II.: child's and parent's suicide.

Seminar: Discussion of the health social work's role and tasks related to the topic. Presentation by students related to the topic of the lecture.

8th week:

Lecture: Death and dying I.: development of death of consciousness, stages of dying.

Seminar: Discussion of the health social work's role and tasks related to the topic. Presentation by students related to the topic of the lecture.

9th week:

Lecture: Death and dying II.: hospice movement

<p>Seminar: Discussion of the health social work's role and tasks related to the topic. Presentation by students related to the topic of the lecture.</p> <p>10th week: Lecture: Death and dying II.: hospice movement. Seminar: Discussion of the health social work's role and tasks related to the topic. Presentation by students related to the topic of the lecture.</p> <p>11th week: Lecture: Grief I.: stages of normal grief. Seminar: Discussion of the health social work's role and tasks related to the topic. Presentation by students related to the topic of the lecture.</p> <p>12th week: Lecture: Grief II.: Forms of complicated grief, children and grief. Presentation by students related to the topic of the lecture.</p> <p>14th week: Lecture: People with chronic illness II.: steps of grieving process, impact of chronic illness on the family, children with chronic illness, effective ways of coping. Seminar: Discussion of the health social work's role and tasks related to the topic. Presentation by students related to the topic of the lecture.</p>
--	---

Requirements

Prerequisite: There are no requirements to take the Clients and Methods of Social Work.

regular participation in lessons,
 -active participation in the work,
 -in order to complete the course and get practical market the lecturer gives a list of topics related to the course from which each student have to choose one and present it as oral presentation. The practical grade is based on the student's activity and the quality of the presentation. Practical market will be graded as follows: below 50%:fail (1), 51-65%: pass (2), 66-75%: satisfactory (3), 76-85%: good (4), above 86%: excellent (4).

<p>Content: Theory:</p> <ul style="list-style-type: none"> - Family systemic approach, family system theory, (family as a system, subsystems, boundaries). - The systemic approach of symptoms: the child as a symptom-carrier, the adults as a symptom carrier - Family life cycles, the psychological tasks of normative crises - Injured person's family and its working - The characteristics of reconstructed families - Dying, death, family dynamics of mourning - Structural and asking techniques in the family <p>Practice: During the practice students can deepen the theoretical knowledge learnt at the courses by using different techniques, such as case analysis, film-analysis, situations, situational practices.</p>
<p>Name of module organiser: Andrea Sárváry Ph.D.</p>
<p>Course lecturer(s): Andrea Sárváry Ph.D.</p>

Subject: **HEALTH POLICY**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: 28

1st week:

Lecture: Introduction to health policy. Roles and tasks of health policy.

2nd week:

Lecture: International models of health systems.

3rd week:

Lecture: Strategizing national health. Population consultation.

4th week:

Lecture: Strategizing national health. Situation analysis.

5th week:

Lecture: Strategizing national health. Priority setting.

6th week:

Lecture: Strategizing national health. Strategic planning.

7th week:

Lecture: Strategizing national health. Operational planning.

8th week:

Lecture: Strategizing national health. Costing and Budgeting.

9th week:

Lecture: Strategizing national health. Monitoring and evaluation.

10th week:

Lecture: Health policy at EU level.

11th week:

Lecture: Health care system and its financing in Hungary.

12th week:

Lecture: Migration of health care workers.

13th week:

Lecture: Students' presentations.

14th week:

Lecture: Students' presentations.

Requirements

Attendance at lectures is highly recommended, since the material covered in the lectures will be on the examination.

Testing, evaluation

Each student must prepare an oral presentation from a freely chosen topic related to the subject. The students must also sit for an end-term written test. The test consists of multiple choice questions and essay questions. The grade of the final result will be determined by calculating of the average grade of the oral presentation and the written essay.

Final written exam will be graded as follows:

Percentage (%) Grade

0-59 fail (1)

- 60-69 pass (2)
 70-79 satisfactory (3)
 80-89 good (4)
 90-100 excellent (5)

Lectures and supplementary materials will be available in the Moodle.

<p>Content: The students receive knowledge about the definitions of health politics and policy, they have to know what are the main differences in these two terms, what are the main fields of health policy, the inner workings of health care policymaking, from the legislative process to socioeconomic impacts and they have to know the main health care systems. The students acquire basic knowledge about the of health economy, and about the role and method of health impact assessment in the health policy. The students have to understand the impact of health politics and policy on the health of human populations.</p>
<p>Name of module organiser: György Jóna Ph.D. Habil.</p>
<p>Course lecturer(s): Attila Sárváry Ph.D.</p>

Subject: **HEALTH AND PENSION INSURANCE SYSTEMS**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: 14

1st week:

Lecture:

The development of the insurance structure I.

2nd week:

Lecture:

The development of the insurance structure II.

3rd week:

Lecture: The development of the insurance structure III.

4th week:

Lecture: The development of the insurance structure IV.

5th week:

Lecture: “Pay as you go” system in the social insurance I.

6th week:

Lecture: “Pay as you go” system in the social insurance II.

7th week:

Lecture: Essential elements of the “third party paid” I.

8th week:

Lecture: Essential elements of the “third party paid” II.

9th week:

Lecture: Mechanism of strict/soft budget constraints I.

10th week:

Lecture: Mechanism of strict/soft budget constraints II.

11th week:

Lecture: Mechanism of strict/soft budget constraints III.

12th week:

Lecture: Law system of the health and pension

structure I.

13th week:

Lecture: Law system of the health and pension structure II.

14th week:

Lecture: Law system of the health and pension structure III.

Requirements

Prerequisite:

Active participation is required. If it is necessary, further re-examinations will be arranged at later dates.

Content:

The course aim is to present the evolution and history of the Hungarian and international health and pension system. It is important that the students learn more the law of insurance system and challenges. Active participation is required. If necessary, a second re-examination will be arranged at a later date. We deal with next topics:

- The development of insurance structure,
- “pay as you go” system in the social insurance,
- point of “third party paid”,
- mechanism of strict/soft budget constraints,
- law of health and pension structure.

Lectures and supplementary materials will be available in the Moodle.

Subject: **HEALTH AND SOCIAL LAW I.**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: 14

1st week:

Lecture: Introduction to Health Care and Social Law

2nd week:

Lecture: Relationship between Health and Social Law and other fields of law; The role of health care in the national (state) insurance system

3rd week:

Lecture: The features of insurance benefits

4th week:

Lecture: Health care and social benefits in Employment Law: sick leave, maternity leave and

paternity leave

5th week:

Lecture: Funds of the health care system

6th week:

Lecture: The national health care system in Hungary – Benefits in kind I.

7th week:

Lecture: The national health care system in Hungary – Benefits in kind II.

8th week:

Lecture: Patients’ rights in Hungary

9th week:

Lecture: The national health care system in Hungary – Benefits: sickness benefits

10th week:

Lecture: The national health care system in Hungary – Benefits: maternity benefits

11th week:

Lecture: The national health care system in Hungary – Benefits: disability benefits

12th week:

Lecture: Health care and social benefits in the

social security system I.

13th week:

Lecture: Health care and social benefits in the social security system II.

14th week:

Lecture:
Benefits for families

Requirements

Prerequisite: –

In order to complete the course the lecturer gives a list of titles related to the course from which each student needs to choose one and write a 5-page essay about it by the end of the semester.

Content: The aim of this course is to introduce the interested students into the world of Health and Social Law by providing the basic legal information. By the end of the course the students will be acquainted with the evolution of Health and Social Law and its present regulations. The European Union aspect of the course will be discussed in detail as this knowledge is indispensable for a European citizen. We emphasize the close connection between Health Law and Social Law and at the same time the connections are discussed as required separately so that the features of Social Law as well as Health Law could be described clearly, too. An important part of the course is the introduction of general and special patient rights according to the Act CLIV of 1997 on Health. During the semester we try to expose special questions and theoretical problems from adequate practical side, too.

Lectures and supplementary materials will be available in the Moodle.

Subject: **QUALITY ASSURANCE IN SOCIAL AND HEALTH SYSTEMS**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: 14

1st week:

Lecture:
Basic definitions (quality policy, quality assurance, quality management, quality

development). Quality management and quality development in health care and social services.

2nd week:

Lecture:

Management and Leadership in Quality Engineering. Management systems for improving quality. Cost of quality. Quality philosophies and approaches. Customer needs, and satisfaction.

3rd week:

Lecture:

Management and Leadership in Quality Engineering. Management systems for improving quality. Cost of quality. Quality philosophies and approaches. Customer needs, and satisfaction.

4th week:

Lecture:

Management and Leadership in Quality Engineering. Management systems for improving quality. Cost of quality. Quality philosophies and approaches. Customer needs, and satisfaction.

5th week:

Lecture:

Quality Systems Development, Implementation, and Verification. Elements of a quality system. Documentation systems. Standards and specifications. Quality audits.

6th week:

Lecture:

Quality Systems Development, Implementation, and Verification. Elements of a quality system. Documentation systems. Standards and specifications. Quality audits.

7th week:

Lecture:

Planning, Controlling and Assuring Product and Process Quality. Processes for planning product and service development.

8th week:

Lecture:

Planning, Controlling and Assuring Product and Process Quality. Processes for planning product and service development.

9th week:

Lecture: Reliability and Risk Management.

10th week:

Lecture: Reliability and Risk Management.

11th week:

Lecture: Problem Solving and Quality Improvement.

12th week:

Lecture: Problem Solving and Quality Improvement.

13th week:

Lecture: Quantitative Methods. Concepts of probability and statistics. Statistical decision-making. Statistical Process Control.

14th week:

Lecture: Quantitative Methods. Concepts of probability and statistics. Statistical decision-making. Statistical Process Control.

15th week:

Lecture: Quantitative Methods. Concepts of probability and statistics. Statistical decision-making. Statistical Process Control.

Department of Social Sciences and Social Work

Subject: **HEALTH SOCIAL WORK FIELD PRACTICE I.**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Seminar: 14

Content:

Students will learn about health social work in institutions, social services and health care systems. Students will be involved in external professional training, in medical and social institutions. There they will work with clients from various fields of health social work. In this training the students will learn the methods and forms of work of health social work. There will be small group seminars that will focus on the

competencies of health social work to include the operation of the institution, the patients' medical problems, and methods of intervention that are used where students are doing their field exercise. Course type: seminars and case discussions
Study methods: writing a field journal, oral presentations, preparation of papers, drafting presentation of the field trip experience and case discussions.

Requirements

Prerequisite: --- Requirement: Students keep a report of their experiences, and the applied methods of social work that were used in the field institution. Students prepare reports about social work in the hospital on topics they choose. In the reports students must use publications, interviews with social workers and clients and they can also use their own experience. The size of the article is 10.000 characters with spaces.

Lectures and supplementary materials will be available in the Moodle.

Department of Integrative Health Sciences

Subject: **BASICS OF HEALTH SCIENCES I.**

Year, Semester: 1st year/1st semester

Number of teaching hours:

Lecture: 28

1st week:

Lecture: Definition of health and illness. Biological and environmental factors affecting the health status. Development of pathological processes, aetiology and course of diseases. Non-communicable and communicable diseases. Definition of disability. Prevention, curation and rehabilitation. Composition of a healthcare team.

2nd week:

Lecture: Fundamentals in physiology and pathophysiology, introduction to medical terminology. Structure of the human body: cells, tissues, organs and systems of organs. Function of a healthy human body, controlling mechanisms.

3rd week:

Lecture: Structure and function of the movement system. Calcium handling in normal and pathologic conditions, osteoporosis. Joints and skeletal muscles.

4th week:

Lecture: Structure and function of the cardiovascular system. Impulse generation and conduction in the heart, the heart as a pump. Characterization of normal and abnormal function. Diagnostic tools (ECG, ultrasonography). Blood supply to the heart; myocardial infarct.

5th week:

Lecture: Structure of vessels, features of the peripheral circulation. Blood pressure. Development and complications of hypertension. Arteriosclerosis. Hypotension, collapse, circulatory shock. The blood as the circulating body fluid.

6th week:

Lecture: Structure and function of the respiratory system in normal and pathologic condition. Most frequent pulmonary diseases (risk factors and prevention).

7th week:

Lecture: Structure and function of the gastrointestinal tract. Digestion and absorption. Abnormal function, the most frequent diseases. Role of the liver; hepatitis, cirrhosis.

8th week:

Lecture: Nutrition. Characteristics of the healthy diet. Starvation; obesity and its complications. Energy balance.

9th week:

Lecture: Structure and function of the excretory organs. Renal insufficiency, uraemia. Disturbed electrolyte and water balance.

10th week:

Lecture: System of the endocrine glands; characteristics of the hormonal regulation. Hormonal regulation of the blood glucose level. Diabetes mellitus: aetiology and complications.

11th week:

Lecture: Motor function of the nervous system. Voluntary and reflex regulation of the movement, coordination. Paralysis.

12th week:

Lecture: Features of the autonomic regulation of internal organs. Synergism in the neural and hormonal regulation. Alarm reaction; stress adaptation.

13th week:

Lecture: Features of the autonomic regulation of internal organs. Synergism in the neural and hormonal regulation. Alarm reaction; stress adaptation.

14th week:

Lecture: Higher functions of CNS.
Seminar: Evaluation of the e-learning activity.

Requirements

Prerequisite: none

It is strongly recommended to attend the lectures, and it is compulsory to take part in the e-learning activity. The signature of the Lecture Book may be refused for the semester if one does not show any activity in the e-learning module.

The course content and requirements are the same in the full-time and part-time program.

At the end of the semester, students take a written end of semester exam (ESE) in the Moodle system.

Grades will be given as follows:

0-59%: fail (1)

60-69%: pass (2)

70-79%: satisfactory (3)

80-89%: good (4)

90-100%: excellent (5)

25% of the scores can be achieved in the e-learning module. The scores (maximum 25%) will be added to the score achieved in the ESE test

Department of Nursing and Midwifery

Subject: **REHABILITATION I.**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Lecture: 14

Seminar: 14

1st week:

Lecture: History of rehabilitation.

Seminar: Introduction of the rehabilitation department (hospital, rehabilitation unit).

2nd week:

Lecture: Theory of rehabilitation.

Seminar: Introduction of the rehabilitation department (hospital, rehabilitation unit).

3rd week:

Lecture: Incidence of disability, characteristics of rehabilitation activity.

Seminar: Patient record assessment.

4th week:

Lecture: Rehabilitation-team, members' competencies.

Seminar: Patient record assessment.

5th week:

Lecture: System of rehabilitation services.

Seminar: FIM scale assessment.

6th week:

Lecture: Functional examinations.

Seminar: FIM scale assessment.

7th week:

Lecture: Nursing in the rehabilitation.

Seminar: Participation in the physiotherapy practice.

8th week:

Lecture: Importance of the nutrition during the rehabilitation.

Seminar: Participation in the physiotherapy practice.

9th week:

Lecture: Possibility of the physiotherapy in the rehabilitation.

Seminar: Participation in the rehabilitation practice.

10th week:

Lecture: Ergotherapy.

Seminar: Participation in the rehabilitation practice.

11th week:

Lecture: Knowledge from the aids.

Seminar: Participation in the ergotherapy practice.

12th week:

Lecture: Speech-therapy in the rehabilitation.

Seminar: Participation in the ergotherapy practice.

13th week:

Lecture: Conductive pedagogy in the rehabilitation.

Seminar: Participation in the paediatric rehabilitation unit practice.

14th week:

Lecture: Psychotherapy in the rehabilitation.

Seminar: Participation in the paediatric rehabilitation unit practice.

Requirements

Pre-requirements: None

<p>Content: The students have to understand the relationship and interaction between the social surroundings and health. During the course the students receive a knowledge about the development of social epidemiology, the main terms applied in this field, the educational attainment, the income, the ethnic group how and to what extent influence our health. During the course we are focusing on the health aspects of roma population and the spatial differentiation of mortality.</p> <p>Lectures and supplementary materials will be available in the Moodle.</p> <p>Environment and health risks: a review of the influence and effects of social inequalities. Department of Psychology

Subject: **HEALTH PSYCHOLOGY AND MENTAL HYGIENE II.**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Lecture: 14

Seminar: 14

1st week:

Lecture: Introduction. The summary of the previous course: Health Psychology and Mental Hygiene I.

Seminar: Student presentations related to the topic of the lecture.

2nd week:

Lecture: Stress. Psychological and physiological aspects of stress. Defining stress. Eustress and distress.

Seminar: Student presentations related to the topic of the lecture.

3rd week:

Lecture: Stress and illness. Moderators of stress: social support and coping behavior.

Seminar: Student presentations related to the topic of the lecture.

4th week:

Lecture: Positive psychology and coping behavior.

Seminar: Student presentations related to the topic of the lecture.

5th week:

Lecture: Gender and health I. Women's health issues.

Seminar: Student presentations related to the topic of the lecture.

6th week:

Lecture: Gender and health II. Men's health issues.

Seminar: Student presentations related to the topic of the lecture.

7th week:

Lecture: Health psychology and public health. Eating behavior. Obesity. Physiological and psychological consequences.

Seminar: Student presentations related to the topic of the lecture.

8th week:

Lecture: Lifestyle and health psychology: exercise, sleep, sexual behavior e.g.

Seminar: Student presentations related to the topic of the lecture.

9th week:

Lecture: Pain, pain perception: Subjective, affective and cognitive processes.

Seminar: Student presentations related to the topic of the lecture.

10th week:

Lecture: The role of psychology in pain treatment. The role of psychological interventions in the management of patients with chronic pain.

Seminar: Student presentations related to the topic of the lecture.

11th week:

Lecture: The role of placebo and nocebo effects in health psychology.

Seminar: Student presentations related to the

topic of the lecture.

12th week:

Lecture: Prevention and intervention. Risk behaviors. Health behaviors and health behavior change.

Seminar: Student presentations related to the topic of the lecture.

13th week:

Lecture: Prevention and intervention in different ages. Prevention programs.

Seminar: Student presentations related to the topic of the lecture.

14th week:

Lecture: Work-related Mental Consequences. Mental health issues of helping professionals. Burnout.

Seminar: Student presentations related to the topic of the lecture.

Requirements

Prerequisite: Health Psychology and Mental Hygiene I.

Requirements:

-regular participation in lessons,

-active participation in the work,

-in order to complete the course and get practical market the lecturer gives a list of titles related to the course from which each student must choose one and present it as an oral presentation.

Lectures and supplementary materials will be available in the Moodle.

Department of Social Sciences and Social Work

Subject: **APPLIED RESEARCH METHODOLOGY II.**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Seminar: 28

1st week:

Seminar: Introduction to ARM II.

Compilation of a health questionnaire.

2nd week:

Seminar: Standardized questionnaires to measure health status: The European Quality of Life questionnaire (EuroQol/EQ-5D).

3rd week:

Seminar: Standardized questionnaires to measure health status: Short Form Health Survey (SF-36).

4th week:

Seminar: Standardized questionnaires to measure health status: The Illness Perception Questionnaire (IPQ).

5th week:

Seminar: Standardized questionnaires to measure health status: The World Health Organization Quality of Life (WHOQOL-BREF).

6th week:

Seminar: Standardized questionnaires to measure health status: The HBSC questionnaire (Health Behavior in School-aged Children), The ESPAD (European School Survey Project on Alcohol and other Drugs) questionnaire.

7th week:

Seminar:
Standardized scales and their characteristics.

8th week:

Seminar:
Measurement of Functional Independence and Physical Activity: Bartel Index, Katz ADL Index, IADL – The Physical Self-Maintenance Scale

(PSMS), CASP.

9th week:

Seminar: Measurement of Functional Independence and Physical Activity: The Health Assessment Questionnaire (HAQ), Timed Up and Go Test (TUG), The Tinetti Test, Five Time Sit to Stand (FTSTS), Mini Nutritional Assessment.

10th week:

Seminar: Measurement Tools of Mental and Psychological State: Mini Mental State Examination (MMSE), Beck Depression Inventory, The Hospital Anxiety and Depression Scale (HADS), Life Satisfaction Index (LSI).

11th week:

Seminar: Measurement Tools of Mental and Psychological State: The Family of the PHQ-Questionnaires.

12th week:

Seminar: Measurement of Social Relationships and Social Support: Interpersonal Support Evaluation List, Gierveld Loneliness Scale, UCLA Loneliness Scale, Lubben Social Network Scale (LSNS-18).

13th week:

Seminar: Assessment Techniques to Measure the Characteristics of Those Who Work in Elderly Care: Caregiver Burden Scale (CBS), Social Work Assessment Tool (SWAT), The Hospital Social Work Self-Efficacy Scale.

14th week:

Seminar: Students' presentations.

Requirements

Prerequisite: Applied Research Methodology I.

The course requirement is:

- regular participation in lessons,
- make a short presentation about a chosen health status test. Students can select one from these:

1. The Activities-Specific Balance Confidence
2. Scale The Physical Performance Test
3. The Berg Balance Scale
4. The Clock Drawing Test
5. The Cognitive Capacity Screening Examination
6. Blessed Information-Memory-Concentration Test
7. The Short Portable Mental Status Questionnaire
8. The Geriatric Depression Scale
9. The Hospital Anxiety and Depression Scale
10. FTLDA-Caregiver Burden

Written tasks

- making an own research in a small sample (using 3 different type of questionnaires with 1-2 'clients' in face to face interview or via Internet)
- if it is possible, write a short review about the institution of the client(s) (e.g. if the client lives in an elderly home, you have to write about it – approx.0,5 page)
- make a short description about your client(s) (gender, age, marital status, living conditions, health status, etc.)
- analyze the results of the applied tests
- make a concrete care plan based on the results

Content: The course objective: students will learn about the logic of research in social sciences and health sciences. They learn quantitative and qualitative methods, specific methods and analytical techniques. Specific educational goal is to acquire knowledge independently and in groups and active use of the knowledge gained. The course will contribute to the preparation for a Ph.D. degree as well. The acquisition of knowledge of the course material the student will be able to carry out such work independently or in teams.

Foundations (Language of Research, Philosophy of Research, Conceptualizing, Evaluation Research) – Sampling – Measurement (Validity, Reliability, Levels of Measurement, Survey Research, Interviews, Scaling, Qualitative Measures) – Design – Analysis (Introduction to data analysis, Data Preparation, Descriptive Statistics, Inferential Statistics – Using a spreadsheet: Excel, Calc; using the R program) - Write-Up

Lectures and supplementary materials will be available in the Moodle.

Name of module organiser: Gergely Fábíán Ph.D. Habil.

Subject: **HEALTH AND SOCIAL LAW II.**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Seminar: 14

1st week:

Seminar: Introduction to the Hungarian judicial system.

2nd week:

Seminar: Patients' rights and the responsibilities of the employees of health care service providers I.

3rd week:

Seminar: Patients' rights and the responsibilities of the employees of health care service providers II.

4th week:

Seminar: Liability for damages in Civil Law.

5th week:

Seminar: Liability for damages in Labor Law I.

6th week:

Seminar: Liability for damages in Labor Law II.

7th week:

Seminar: Liability for damages in Criminal Law I.

8th week:

Seminar: Liability for damages in Criminal Law II.

9th week:

Seminar: Medical liability in the European Union I.

10th week:

Seminar: Medical liability in the European Union II.

11th week:

Seminar: Civil procedures related to the liability of health care service providers.

12th week:

Seminar: Civil procedures related to the liability of the employees of health care service providers.

13th week:

Seminar: Procedures related to the benefits of the national (state) insurance system.

14th week:

Seminar: Procedures related to the benefits of the social security system.

Requirements

Prerequisite: Health and Social Law I.

In order to complete the course the lecturer gives a list of titles related to the course from which each student needs to choose one and write a 5-page essay about it by the end of the semester, using the case law discussed during the course.

<p>Content: The aim of the second semester of the course is to help the students solve practical cases according to the information learnt in both the first and second semester. The students will be acquainted with the Hungarian judicial system and the regulation and civil procedures related to the liability of health care service providers and their employees. The rules of liability will be discussed in detail from the aspect of Civil Law, Labour Law and Criminal Law. At the end of the course students should be able to understand and explain the regulations concerning the liability for damages, work with information on concerning regulations and judgements and solve practical cases and elaborate complex solutions in the field of Health and Social Law.</p> <p>Lectures and supplementary materials will be available in the Moodle.</p>

Department of Social Sciences and Social Work

Subject: **HEALTH SOCIAL WORK FIELD PRACTICE II.**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Seminar: 14

Practical: 42

<p>Content: The course provides models of competencies of health social work to students. Students will work with professionals in various types of services. They will perform field practice in small groups, under the guidance of professional instructors and will individually perform tasks tailored directly to the students, who will be involved into services provided to clients. They will prepare short surveys (e.g. interviews, environmental studies) describing the social status of the clients. The seminar will be held in small groups, with the aim of processing</p>	<p>the clients' problems, methods of intervention, the operation of services, and learning the competencies of medical social work.</p> <p>Course type: field practice, seminars and case discussions.</p> <p>Study methods: writing a field journal, oral presentations, preparation of papers, drafting presentation of the field trip experience and case discussions.</p>
---	---

Requirements

Prerequisite: Health Social Work Field Practice I.

Requirement: Students keep a report of their experiences, and the applied methods of social work that were used in the field institution. Students write the social history of 2 clients in the field institution. They collect information and conduct interviews, draw a genogram, and an ecomap of the clients and their supporting network. The students will have to write the medical social histories of the clients after analyzing their problems.

Part II. Content:

This course gives models for students about the health social work professional competencies. Students will be prepared working in collaboration with professionals in the services. Second-semester-students exercise to broaden the types of field. The field work practice in small groups, broken down where health social work a deal more effectively institute under the guidance of professional teachers working knowledge of terrain, self-performing individual tasks. During the semester the students involved into service for the clients, prepare short surveys (eg, interviews, environmental studies) about the social status of clients. The seminar will be held in small groups, which aims to turn the operation of the client's problems, methods of intervention and processing services, medical social work competencies formulation.

Study type: field exercise, seminars and case discussions.

Study methods: writing field journal, oral presentations, preparation of papers, presentation of the field trip experience drafting, case discussions.

Lectures and supplementary materials will be available in the Moodle.

Course lecturer(s): Katalin Szoboszlai Ph.D. Habil., Anikó Panna Tóth Ph.D.

Department of Integrative Health Sciences

Subject: **BASICS OF HEALTH SCIENCES II.**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

Lecture: 14

Seminar: 14

1st week:

Seminar: Introduction to the course. Requirements. Topic choice

2nd week:

Seminar: Clinical relations of cardiovascular diseases.

3rd week:

Seminar: Cardiovascular diseases: effects on the quality of life.

4th week:

Seminar: Disorders of the respiratory system: pathomechanism and symptoms of the diseases with high relevance to public health; tools for prevention.

5th week:

Seminar: Hepatic diseases: cirrhosis, hepatitis, methods in prevention.

6th week:

Seminar: Renal diseases: nephritis, renal insufficiency, uraemia; kidney transplantation, haemodialysis.

7th week:

Seminar: Risk factors, pathomechanism, symptoms and social relations of diabetes mellitus.

8th week:

Seminar: Diseases of the nervous system.

9th week:

Seminar: Effects of neural diseases on the quality of life.

10th week:

Seminar: Dementia. Clinical relations, explorative techniques.

11th week:

Seminar: Physiotherapy and ergotherapy in the neural disorders.

12th week:

Seminar: Assessment of ADL functions.

13th week:

Seminar: Diseases of the musculoskeletal system (arthritis, arthrosis, myopathies) and their social relations.

14th week:

Seminar: Evaluation of the mid-semester activity, closing the course.

Requirements

Prerequisite: **Basics of Health Sciences I.**

It is compulsory to attend all the contact hours and to take part in the e-learning activity. The signature of the Lecture Book may be refused for the semester if one does not show any activity in the e-learning module.

The course content and requirements are the same in the full-time and part-time program. The number of contact hours in part-time program is 10 seminars, in adequate grouping according to the actual timetable for the part-time students.

At the end of the semester the activity in the Moodle system will be evaluated. The grade will be given according to the next:

0-59%: fail (1)

60-69%: pass (2)

70-79%: satisfactory (3)

80-89%: good (4)

90-100%: excellent (5)

Name of module organiser: Zsuzsanna Pályiné Krekk Ph.D.
Course lecturer(s): Gergő Harsányi M.D.

CHAPTER 11

ACADEMIC PROGRAM FOR THE 2ND YEAR

Department of Methodology and Prevention for Health Visitors

Subject: **SOCIAL SURROUNDINGS AND EPIDEMIOLOGY**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

Lecture: **14**

Seminar: **14**

1st week:

Lecture:

Introduction to social epidemiology. Social determinants of health.

Seminar: Measurement of social inequalities. Health and social indicators.

2nd week:

Lecture: The spatial differences in mortality. Mortality trends and differences in Europe and in Hungary.

Seminar: Measurement of social inequalities. Health and social indicators.

3rd week:

Lecture: The spatial differences in mortality. Mortality trends and differences in Europe and in Hungary.

Seminar: Sub-regional differences in mortality and the social determinants of mortality.

4th week:

Lecture: Relationship between educational level and mortality. Life expectancy, mortality due to ischemic heart diseases, cancer diseases.

Seminar: Relationship between educational level and mortality. Case- study.

5th week:

Lecture: Relationship between educational level and mortality. Life expectancy, mortality due to ischemic heart diseases, cancer diseases.

Seminar: Relationship between educational level and mortality. Case- study.

6th week:

Lecture: The socio-economic situation of the Roma population in the EU and in Hungary.

Seminar: EU level strategies and programs for social inclusion of the Roma population. Hungarian strategy and programs for social inclusion of the Roma population.

7th week:

Lecture: The socio-economic situation of the Roma population in the EU and in Hungary.

Seminar: EU level strategies and programs for social inclusion of the Roma population. Hungarian strategy and programs for social inclusion of the Roma population.

8th week:

Lecture: Health status and access to health care of the Roma population.

Seminar: Good practices to improve health status of the Roma population in the EU and in Hungary.

9th week:

Lecture: Health status and access to health care of the Roma population.

Seminar: Good practices to improve health status of the Roma population in the EU and in Hungary.

10th week:

Lecture: Social determinants of infectious diseases.

Seminar: International programs to reduce the incidence and mortality of infectious diseases.

11th week:

Lecture: Social determinants of maternal and child mortality.

Seminar: International programs to reduce maternal and child mortality.

12th week:

Lecture: Tackling health inequalities in the EU.

Seminar: Students' presentations.

13th week:

Lecture: Tackling health inequalities in Hungary.

Seminar: Students' presentations.

14th week:

Lecture: Consultation. Final test.

Seminar: Students' presentations. Consultation.

Requirements

Prerequisite: -

Attendance on lectures is highly recommended, since the topics in examination cover the lectured topics. Attendance of practices is compulsory. The maximum percentage of allowable absences is 10 % which is a total of 2 out of the 14 weekly classes if the number of absences is more than 2, the final signature is refused and the student must repeat the course.

Testing, evaluation

Each student must prepare an oral presentation and a min. 3 - max. 5 pages written essay from a freely chosen topic related to the subject. The grade of the final result will be determined by calculating of the average grade of the oral presentation and the written essay.

Content: The students have to understand the relationship and interaction between the social surroundings and health. During the course the students receive a knowledge about the development of social epidemiology, the main terms applied in this field, the educational attainment, the income, the ethnic group how and to what extent influence our health. During the course we are focusing on the health aspects of roma population and the spatial differentiation of mortality.

Lectures and supplementary materials will be available in the Moodle.

Environment and health risks: a review of the influence and effects of social inequalities. **WHO Regional Office for Europe, Copenhagen, 2010.**

Equity, social determinants and public health programmes. WHO, 2010.

Closing the gap in a generation: health equity through action on the social determinants of health: final report: executive summary. WHO, 2008.

CHAPTER 14 TITLES OF THESIS

Department of Health Informatics

1. Title: Application of standard tests – case studies/ CASP-19 & 12
 2. Title: Life expectancy in Nigeria – WHO Databases
 3. Title: Statistical analyzes in the health social work / SF-36
- Tutor: *Péter Takács Ph.D.*

Department of Nursing and Midwifery

1. Title: Evaluation of health policy of a given country to reduce the health inequalities
 2. Title: Evaluation the impact of a health policy program
 3. Title: Good practices/programs for tackling health inequalities
 4. Title: Role of health policy in the health of population
- Tutor: *Attila Sárváry Ph.D.*

Department of Gerontology

1. Title: The health social worker' role in the rehabilitation process of the different diagnosis
 2. Title: The health social worker's added values to the rehabilitation patients' condition
- Tutor: *Katalin Papp Ph.D.*

8. Title: Case analyze – the analysis of the professional role in country specific situation
9. Title: Community based health care services and social services among drug users in Nyíregyháza
10. Title: Community development and neighborhood programs in your country
11. Title: Community- based health and social services in your country
12. Title: De-institutionalisation a good practice in your country
13. Title: Definitions and protocols of health social work
14. Title: Elderly abuse, mistreatment, neglect and the legal, professional answers in my country

15. Title: Immigration in Europe
 16. Title: Mutual organization and their role in support of the patients suffering from chronic disease
 17. Title: Pension systems in Europe
 18. Title: Protocols of health social work working in health care settings
 19. Title: Role of professionals concerning to the complex treatment of the chosen chronic illness
 20. Title: Role of professionals in formal elderly care system in my country
 21. Title: Role of professionals in formal health care settings in my country
 22. Title: Role of professionals in the informal caregiving in my country
 23. Title: Social work and health care
 24. Title: The health risks of social problems, and social exclusion
 25. Title: The migrant work and its impact in elderly care in my country
 26. Title: The social risks of health problems
- Tutor: *László Patyán Ph.D.*

Department of Psychology

1. Title: Psychology aspects of early marriage and parenting
 2. Title: Psychological aspects of migration
 3. Title: Psychological aspects of abuse
- Tutor: *Andrea Sárváry Ph.D.*

4. Title: Building Organizational Culture in Social Economy
 5. Title: Leadership Style and Maturity of Followers - a Contingency Approach
 - 6health. Title: The Wheelbarrow Concept: (Naive) Motivational Techniques and Theories of Leaders in the Social Economy
- Tutor: *János Kovács M.A.*

Department of Social Sciences and Social Work

1. Title: Analyze of integration program in case of freely chosen target group and country
2. Title: Case study in the social work

3. Title: Social Inequalities: comparative analysis

4. Title: Social work in health care in the world

5. Title: Social work in hospital

6. Interprofessional work between social workers and other professionals

Tutor: ***Katalin Szoboszlai Ph.D. Habil.***

7. Title: Fundamental aspects of the social care schemes

8. Title: New tendencies in the social insurance systems

Tutor: ***Henriett Nádasné Rab Ph.D. Habil.***

9. Title: Country differences in devices, services for people with disabilities

10. Title: Different discrimination of people with different disabilities

11. Title: Different needs of people with different disabilities and different answers, services for these needs

12. Title: From human rights to normal quality of life of people with disabilities

13. Title: The Human Right movements of people with disabilities: their connection and interaction with other human right movements

Tutor: ***Zsuzsanna Csató Ph.D.***

14. Title: Correlation between social networking and health status

15. Title: Efficiency of managed care system at international level

16. Title: Efficiency of pay-as-you-go scheme

17. Title: Evolution of the American and/or British welfare system

18. Title: Links between health and regional inequalities

Tutor: ***György Jóna Ph.D. Habil.***

19. Title: The local faces of global poverty

20. Title: Foreign students' social contacts at University of Debrecen

Tutor: ***Mihály Fónai CSc.***

CHAPTER 15

FRIGYES VERZÁR COLLEGE FOR ADVANCED STUDIES

Frigyes Verzár College for Advanced Studies To build a knowledge-based society, highly qualified professionals are necessary. In order to have committed, highly qualified professionals in Hungary, gifted and hard-working students should be supported.

Colleges for advanced studies provide additional training in higher education. They are institutions with a special internal study system and self-government. The Rules and Regulations of the Frigyes Verzár College for Advanced Studies in the University of Debrecen Faculty of Health Sciences continues the traditions of the Hungarian higher education and the basic principles laid down in the Magna Charta of the European Universities. The Frigyes Verzár College for Advanced Studies works with Hungarian and international institutions and organizations in order to fulfill the theory of Universitas by further developing and at the same time preserving the intellectual heritage of the Hungarian higher education. Its goal is to contribute to the development of the University of Debrecen and to the programs of the Faculty of Health Sciences with superior education and services and in both basic and applied sciences. The College for Advanced Studies is a centrally supported system organized by the University of Debrecen Faculty Sciences of Health in order to support talented students. It provides opportunities for students to get extra knowledge within their specific, area and circle of interest and, with assistance from the student support system they can conduct research. Frigyes Verzár College for Advanced Studies provides both general and specific courses to its members.

One of the goals of the Frigyes Verzár College for Advanced Studies is to develop an interdisciplinary program that helps to prepare open-minded, well prepared professionals who can communicate in foreign languages and can contribute to the development of their academic area.

In addition to the centrally organized programs it supports many diverse professional initiatives of the students and assist educational, scientific and community life of its students with services and technical equipment.

Frigyes Verzár College for Advanced Studies provides educational, research and artistic freedom to its each teacher and researcher as outlined within the framework of the laws, Organizational and Operational Rules and the internal Regulations of the College.

The Organizational and Operational Rules and the Regulations of the Frigyes Verzár College for Advanced Studies are the primary source of law in each field that is not regulated by any higher level law or by the Deed of Foundation.
